

Jatin Patware

Senior Data Engineer

Hyderabad, India | jatincse19@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Data Engineer with 8+ years of experience known for strong system design instincts and structured logical thinking — translating ambiguous business and infrastructure problems into clean, scalable data architectures. Experienced across the full data platform lifecycle: from requirements and design through to delivery, governance, and optimisation. Deep hands-on exposure to Apache Spark, AWS, and distributed pipeline design at petabyte scale. Currently at Fanatics, one of the world's largest licensed sports merchandise platforms. Equally comfortable whiteboarding a data mesh architecture, reviewing an engineer's design, or digging into a pipeline bottleneck. Experienced in mentoring engineers, driving cross-functional alignment, and integrating AI/LLM tooling into data workflows.

TECHNICAL SKILLS

Core	System Design · Data Architecture · Apache Spark (Scala, PySpark) · SQL · Python · Distributed Systems · ETL / Pipeline Design
Cloud & Infra	AWS (S3, EMR, Glue, Lambda, Redshift, Bedrock) · Azure (ADF, Functions, HD Insights) · Snowflake · Docker
Streaming	Apache Kafka · Kafka Streams · Event-driven Architecture
Query Engines	Spark SQL · Trino · Hive
Orchestration	Apache Airflow · Stonebranch
Data Platform	Data Mesh · Data Contracts · Data Lineage · Data Quality Frameworks · Apache Iceberg · Data Cataloguing
AI / LLM	AWS Bedrock · Bedrock Agents · LLaMA3 · Glean · Claude (Anthropic) · LLM Pipeline Integration
BI / Legacy	Power BI · SSAS (Tabular) · SSMS · SSIS · C#
Other	CI/CD Pipelines · Git · Agile / Scrum

WORK EXPERIENCE

Fanatics — Global Licensed Sports Merchandise Platform

Senior Data Engineer

Mar 2025 – Present

<i>Stack: Apache Spark (Scala), AWS (S3, EMR, Glue, Lambda, Bedrock), Kafka Streams, Airflow, Stonebranch, Trino, Python, SQL, Docker</i>

- Own design and reliability of real-time order event processing on Kafka Streams — canonical data models and transformation contracts supporting **30–40K messages/min at peak** across multiple downstream

consumers

- Maintain and evolve the canonical Iceberg layer at **petabyte scale**, consumed by downstream BI and analytics systems
- Built an **agentic solution for automated order data lineage tracing** across a complex multi-layer pipeline — enabling engineers to debug field discrepancies end-to-end across Kafka Streams, Iceberg, and downstream BI layers
- Integrated LLM-powered capabilities using AWS Bedrock Agents, Glean, and Claude — automated insight surfacing and reduced engineering overhead
- Mentored junior and mid-level engineers; go-to design reviewer across cross-functional squads
- Drove data mesh adoption — data contracts, lineage, and cataloguing at platform scale

Data Engineer III

Mar 2022 – Feb 2025

Stack: Apache Spark (Scala), AWS (S3, EMR, Glue, Lambda), Kafka Streams, Stonebranch, Trino, Python, SQL

- Designed and delivered Spark batch pipelines on AWS processing petabyte-scale commerce data — significant runtime and compute cost reductions via Spark UI and DAG tuning
- Built backend data pipelines powering executive dashboards — enabling **200+ ecommerce metrics** consumed by senior leadership
- Designed and built an **in-house data quality framework in Scala/Spark with YAML-based rule configuration** — adopted across critical pipelines for validation, SLA enforcement, and alerting
- Built an **LLM-powered executive insight engine** (internal hackathon) — LLaMA3 on EC2, invoked via AWS Lambda, generating natural language insights from enriched S3 commerce data
- Built ETL pipelines in Scala/Spark powering BI reporting layers
- Owned orchestration across **100+ workflows** on Stonebranch

Fractal Analytics

Nov 2020 – Jan 2022

Data Engineer

Stack: Snowflake · Azure Data Factory · Python · SQL

- Built ETL pipelines into Snowflake for Marketing Mix Modelling and Supply Chain analytics clients
- Created transformation and harmonisation layers across client datasets
- Worked across multiple client engagements with focus on pipeline reliability and data consistency

MAQ Software

Jul 2018 – Oct 2020

BI & Backend Engineer

Stack: SSMS · SSAS · SQL · Azure Data Factory · Azure Functions · C# · Power BI · HD Insights

- Developed enterprise BI solutions — tabular SSAS models, SSIS ETL pipelines, stored procedures, and Power BI dashboards
- Built Azure Functions for API ingestion and CI/CD pipelines for automated deployment

CERTIFICATIONS

- **AWS Certified Data Engineer – Associate**
- Microsoft Azure DP-200 / DP-201
- Microsoft Azure AZ-203
- Microsoft Power BI 70-778

- Coursera Data Structures & Algorithms Specialisation

EDUCATION

M.Tech — Computer Science & Engineering

2016 – 2018

National Institute of Technology Allahabad (MNNIT) · CGPA 8.55 / 10

- AIR-1518 in GATE 2016 (Computer Science)
- Co-ordinator, Data Analytics & ML Workshop (2017, 2018)

B.E. — Computer Science & Engineering

2012 – 2016

Madhav Institute of Technology & Science, Gwalior (MITS) · CGPA 7.8 / 10

ACHIEVEMENTS

- AIR-1518 in GATE 2016 (Computer Science)
- Recognised by management for autonomous problem-solving on a high-impact production project at Fanatics
- Co-ordinator, Data Analytics & ML Workshop at MNNIT (2017, 2018)
