## SUMMARY

Data Engineer with 8+ years of experience known for **strong system design instincts and structured logical thinking** — translating ambiguous business and infrastructure problems into clean, scalable data architectures. Experienced across the full data platform lifecycle: from requirements and design through to delivery, governance, and optimisation. Deep hands-on exposure to **Apache Spark, AWS, and distributed pipeline design** at petabyte scale. Currently at Fanatics, one of the world's largest licensed sports merchandise platforms. Equally comfortable whiteboarding a data mesh architecture, reviewing an engineer's design, or digging into a pipeline bottleneck. Experienced in **mentoring engineers, driving cross-functional alignment**, and integrating **AI/LLM tooling** into data workflows. Works well with minimal direction and moves fast when priorities shift.

## TECHNICAL SKILLS

|               |                                                                                                                                |
|---------------|--------------------------------------------------------------------------------------------------------------------------------|
| Core          | System Design · Data Architecture · Apache Spark (Scala, PySpark) · SQL · Python · Distributed Systems · ETL / Pipeline Design |
| Cloud & Infra | AWS (S3, EMR, Glue, Lambda, Redshift, Bedrock) · Azure (ADF, Functions, HD Insights) · Snowflake · Docker                      |
| Streaming     | Apache Kafka · Kafka Streams · Event-driven Architecture                                                                       |
| Query Engines | Spark SQL · Trino · Hive                                                                                                       |
| Orchestration | Apache Airflow · Stonebranch                                                                                                   |
| Data Platform | Data Mesh · Data Contracts · Data Lineage · Data Quality Frameworks · Data Cataloguing                                         |
| AI / LLM      | AWS Bedrock · Bedrock Agents · Glean · Claude (Anthropic) · LLM pipeline integration                                           |
| BI / Legacy   | Power BI · SSAS (Tabular) · SSMS · SSIS · C#                                                                                   |
| Other         | CI/CD Pipelines · Git · Agile / Scrum                                                                                          |

## WORK EXPERIENCE

**Fanatics** — Global Licensed Sports Merchandise Platform Feb 2022 – Present  
**Senior Data Engineer**

**Stack:** Apache Spark (Scala), AWS (S3, EMR, Glue, Lambda, Bedrock), Kafka Streams, Airflow, Stonebranch, Trino, Python, SQL, Docker

- **Designed the architecture and data flow for large-scale Spark batch and streaming pipelines on AWS**, processing petabyte-scale commerce data; led performance analysis and optimisation across pipeline execution using Spark UI and DAG inspection, achieving significant runtime and compute cost reductions.
- **Contributed to the design and evolution of a real-time order event processing ecosystem** on Kafka Streams — defining canonical data models, ingestion patterns, and transformation contracts that support throughput of up to 30,000–40,000 messages/minute at peak across multiple downstream consumers.
- **Contributed to data mesh adoption** across engineering domains — working across data contracts, lineage, and cataloguing to improve discoverability and trust at platform scale.
- **Designed a data quality framework** adopted across critical pipelines — defined validation rules, SLA contracts, and alerting patterns to proactively prevent downstream data incidents.
- **Mentored and guided junior and mid-level data engineers** across system design, pipeline best practices, and the data maturity lifecycle; served as a go-to design reviewer and technical reference across cross-functional squads.
- **Owned orchestration design for 100+ pipeline workflows** across Airflow and Stonebranch — rationalised dependency graphs, improved observability patterns, and standardised failure recovery approaches.

- **Designed and integrated LLM-powered capabilities** into data and engineering workflows — including a Bedrock Agents solution to surface automated insights from structured operational data, and applied Glean and Claude to accelerate internal knowledge retrieval and reduce engineering overhead.

**Fractal Analytics**  
**Data Engineer**

Nov 2020 – Jan 2022

**Stack:** Snowflake · Azure Data Factory · Python · SQL

- Built ETL pipelines pulling from heterogeneous sources into Snowflake for Marketing Mix and Supply Chain analytical models; created transformation views and harmonisation layers across client datasets.

**MAQ Software**  
**BI & Backend Engineer**

Jul 2018 – Oct 2020

**Stack:** SSMS · SSAS · SQL · Azure Data Factory · Azure Functions · C# · Power BI · HD Insights

- Developed enterprise BI solutions — tabular data models, ETL pipelines, stored procedures, and Power BI dashboards; built Azure Functions for API ingestion and CI/CD pipelines for automated deployment.

---

**CERTIFICATIONS**

AWS Certified Data Engineer – Associate · Microsoft Azure DP-200 / DP-201 · Microsoft Azure AZ-203 · Microsoft Querying Data with Transact-SQL · Microsoft Developing SQL Databases & Data Models · Microsoft Power BI 70-778 · Coursera Data Structures & Algorithms Specialisation

---

**EDUCATION**

**M.Tech – Computer Science & Engineering** 2016 – 2018  
MNNIT Allahabad (NIT), Prayagraj · CGPA 8.55 / 10

**B.E. – Computer Science & Engineering** 2012 – 2016  
Madhav Institute of Technology & Science, Gwalior · CGPA 7.8 / 10

---

**ACHIEVEMENTS**

AIR-1518 in GATE 2016 (Computer Science) · Recognised by management for autonomous problem-solving on a high-impact production project · Co-ordinator, Data Analytics & ML Workshop at MNNIT (2017, 2018)
